Package 'robotstxt'

September 3, 2020

Date 2020-09-03

Type Package

Title A 'robots.txt' Parser and 'Webbot'/'Spider'/'Crawler'
Permissions Checker

Version 0.7.13

Description Provides functions to download and parse 'robots.txt' files.
Ultimately the package makes it easy to check if bots
(spiders, crawler, scrapers, ...) are allowed to access specific
resources on a domain.

License MIT + file LICENSE

LazyData TRUE

BugReports <https://github.com/ropensci/robotstxt/issues>

URL <https://docs.ropensci.org/robotstxt/>,
<https://github.com/ropensci/robotstxt>

Imports stringr (>= 1.0.0), httr (>= 1.0.0), spiderbar (>= 0.2.0),
future (>= 1.6.2), future.apply (>= 1.0.0), magrittr, utils

Suggests knitr, rmarkdown, dplyr, testthat, covr

Depends R (>= 3.0.0)

VignetteBuilder knitr

RoxygenNote 7.1.1

Encoding UTF-8

NeedsCompilation no

Author Peter Meissner [aut, cre],

R **topics documented:**

```
as.list.robotstxt_text
```
                                            Method as.list() for class robotstxt_text

---

Description

Method as.list() for class robotstxt_text

Usage

```
## S3 method for class 'robotstxt_text'
as.list(x, ...)
```

Arguments

x	class robotstxt_text object to be transformed into list
...	further arguments (inherited from base::as.list())

---

fix_url	*fix_url*

Description

fix_url

Usage

```
fix_url(url)
```

Arguments

url	a character string containing a single URL

---

get_robotstxt	*downloading robots.txt file*

Description

downloading robots.txt file

Usage

```
get_robotstxt(
  domain,
  warn = getOption("robotstxt_warn", TRUE),
  force = FALSE,
  user_agent = utils::sessionInfo()$R.version$version.string,
  ssl_verifypeer = c(1, 0),
  encoding = "UTF-8",
  verbose = FALSE,
  rt_request_handler = robotstxt::rt_request_handler,
  rt_robotstxt_http_getter = robotstxt::get_robotstxt_http_get,
  on_server_error = on_server_error_default,
  on_client_error = on_client_error_default,
  on_not_found = on_not_found_default,
  on_redirect = on_redirect_default,
  on_domain_change = on_domain_change_default,
  on_file_type_mismatch = on_file_type_mismatch_default,
  on_suspect_content = on_suspect_content_default
)
```

Arguments

`domain`	domain from which to download robots.txt file
`warn`	warn about being unable to download domain/robots.txt because of
`force`	if TRUE instead of using possible cached results the function will re-download the robotstxt file HTTP response status 404. If this happens,
`user_agent`	HTTP user-agent string to be used to retrieve robots.txt file from domain
`ssl_verifypeer`	analog to CURL option https://curl.haxx.se/libcurl/c/CURLOPT_SSL_VERIFYPEER.html – and might help with robots.txt file retrieval in some cases
`encoding`	Encoding of the robots.txt file.
`verbose`	make function print out more information
`rt_request_handler`	
	handler function that handles request according to the event handlers specified
`rt_robotstxt_http_getter`	
	function that executes HTTP request
`on_server_error`	
	request state handler for any 5xx status
`on_client_error`	
	request state handler for any 4xx HTTP status that is not 404
`on_not_found`	request state handler for HTTP status 404
`on_redirect`	request state handler for any 3xx HTTP status
`on_domain_change`	
	request state handler for any 3xx HTTP status where domain did change as well
`on_file_type_mismatch`	
	request state handler for content type other than 'text/plain'
`on_suspect_content`	
	request state handler for content that seems to be something else than a robots.txt file (usually a JSON, XML or HTML)

`get_robotstxts`	*function to get multiple robotstxt files*

Description

function to get multiple robotstxt files

Usage

```
get_robotstxts(
  domain,
  warn = TRUE,
  force = FALSE,
  user_agent = utils::sessionInfo()$R.version$version.string,
  ssl_verifypeer = c(1, 0),
```

```
    use_futures = FALSE,
    verbose = FALSE,
    rt_request_handler = robotstxt::rt_request_handler,
    rt_robotstxt_http_getter = robotstxt::get_robotstxt_http_get,
    on_server_error = on_server_error_default,
    on_client_error = on_client_error_default,
    on_not_found = on_not_found_default,
    on_redirect = on_redirect_default,
    on_domain_change = on_domain_change_default,
    on_file_type_mismatch = on_file_type_mismatch_default,
    on_suspect_content = on_suspect_content_default
)
```

Arguments

domain	domain from which to download robots.txt file
warn	warn about being unable to download domain/robots.txt because of
force	if TRUE instead of using possible cached results the function will re-download the robotstxt file HTTP response status 404. If this happens,
user_agent	HTTP user-agent string to be used to retrieve robots.txt file from domain
ssl_verifypeer	analog to CURL option https://curl.haxx.se/libcurl/c/CURLOPT_SSL_VERIFYPEER.html – and might help with robots.txt file retrieval in some cases
use_futures	Should future::future_lapply be used for possible parallel/async retrieval or not. Note: check out help pages and vignettes of package future on how to set up plans for future execution because the robotstxt package does not do it on its own.
verbose	make function print out more information
rt_request_handler	
	handler function that handles request according to the event handlers specified
rt_robotstxt_http_getter	
	function that executes HTTP request
on_server_error	
	request state handler for any 5xx status
on_client_error	
	request state handler for any 4xx HTTP status that is not 404
on_not_found	request state handler for HTTP status 404
on_redirect	request state handler for any 3xx HTTP status
on_domain_change	
	request state handler for any 3xx HTTP status where domain did change as well
on_file_type_mismatch	
	request state handler for content type other than 'text/plain'
on_suspect_content	
	request state handler for content that seems to be something else than a robots.txt file (usually a JSON, XML or HTML)

---

guess_domain   *function guessing domain from path*

Description

function guessing domain from path

Usage

```
guess_domain(x)
```

Arguments

x   path aka URL from which to infer domain

---

http_domain_changed   *http_domain_changed*

Description

http_domain_changed

Usage

```
http_domain_changed(response)
```

Arguments

response   an httr response object, e.g. from a call to httr::GET()

Value

logical of length 1 indicating whether or not any domain change happened during the HTTP request

---

http_subdomain_changed

http_subdomain_changed

Description

http_subdomain_changed

Usage

```
http_subdomain_changed(response)
```

Arguments

response   an httr response object, e.g. from a call to httr::GET()

Value

logical of length 1 indicating whether or not any domain change happened during the HTTP request

---

http_was_redirected   *http_was_redirected*

Description

http_was_redirected

Usage

```
http_was_redirected(response)
```

Arguments

response   an httr response object, e.g. from a call to httr::GET()

Value

logical of length 1 indicating whether or not any redirect happened during the HTTP request

---

is_suspect_robotstxt   *is_suspect_robotstxt*

Description

function that checks if file is valid / parsable robots.txt file

Usage

```
is_suspect_robotstxt(text)
```

Arguments

text   content of a robots.txt file provides as character vector

---

is_valid_robotstxt   *function that checks if file is valid / parsable robots.txt file*

Description

function that checks if file is valid / parsable robots.txt file

Usage

```
is_valid_robotstxt(text, check_strickt_ascii = FALSE)
```

Arguments

text   content of a robots.txt file provides as character vector

check_strickt_ascii

                        whether or not to check if content does adhere to the specification of RFC to use
                        plain text aka ASCII

---

list_merge   *Merge a number of named lists in sequential order*

Description

Merge a number of named lists in sequential order

Usage

```
list_merge(...)
```

Arguments

`...`	named lists

Details

List merging is usually useful in the merging of program settings or configuraion with multiple versions across time, or multiple administrative levels. For example, a program settings may have an initial version in which most keys are defined and specified. In later versions, partial modifications are recorded. In this case, list merging can be useful to merge all versions of settings in release order of these versions. The result is an fully updated settings with all later modifications applied.

Author(s)

Kun Ren <mail@renkun.me>

The function merges a number of lists in sequential order by modifyList, that is, the later list always modifies the former list and form a merged list, and the resulted list is again being merged with the next list. The process is repeated until all lists in `...` or `list` are exausted.

---

null_to_defeault   *null_to_defeault*

Description

null_to_defeault

Usage

```
null_to_defeault(x, d)
```

Arguments

x	value to check and return
d	value to return in case x is NULL

---

parse_robotstxt   *function parsing robots.txt*

Description

function parsing robots.txt

Usage

```
parse_robotstxt(txt)
```

Arguments

txt   content of the robots.txt file

Value

a named list with useragents, comments, permissions, sitemap

---

paths_allowed   *check if a bot has permissions to access page(s)*

Description

check if a bot has permissions to access page(s)

Usage

```
paths_allowed(
  paths = "/",
  domain = "auto",
  bot = "*",
  user_agent = utils::sessionInfo()$R.version$version.string,
  check_method = c("spiderbar"),
  warn = getOption("robotstxt_warn", TRUE),
  force = FALSE,
  ssl_verifypeer = c(1, 0),
  use_futures = TRUE,
  robotstxt_list = NULL,
  verbose = FALSE,
  rt_request_handler = robotstxt::rt_request_handler,
  rt_robotstxt_http_getter = robotstxt::get_robotstxt_http_get,
  on_server_error = on_server_error_default,
  on_client_error = on_client_error_default,
  on_not_found = on_not_found_default,
  on_redirect = on_redirect_default,
```

```
    on_domain_change = on_domain_change_default,
    on_file_type_mismatch = on_file_type_mismatch_default,
    on_suspect_content = on_suspect_content_default
)
```

Arguments

paths	paths for which to check bot's permission, defaults to "/". Please, note that path to a folder should end with a trailing slash ("/").
domain	Domain for which paths should be checked. Defaults to "auto". If set to "auto" function will try to guess the domain by parsing the paths argument. Note however, that these are educated guesses which might utterly fail. To be on the safe side, provide appropriate domains manually.
bot	name of the bot, defaults to "*"
user_agent	HTTP user-agent string to be used to retrieve robots.txt file from domain
check_method	at the moment only kept for backward compatibility reasons - do not use parameter anymore –> will let the function simply use the default
warn	suppress warnings
force	if TRUE instead of using possible cached results the function will re-download the robotstxt file HTTP response status 404. If this happens,
ssl_verifypeer	analog to CURL option https://curl.haxx.se/libcurl/c/CURLOPT_SSL_VERIFYPEER.html – and might help with robots.txt file retrieval in some cases
use_futures	Should future::future_lapply be used for possible parallel/async retrieval or not. Note: check out help pages and vignettes of package future on how to set up plans for future execution because the robotstxt package does not do it on its own.
robotstxt_list	either NULL – the default – or a list of character vectors with one vector per path to check
verbose	make function print out more information
rt_request_handler	
	handler function that handles request according to the event handlers specified
rt_robotstxt_http_getter	
	function that executes HTTP request
on_server_error	
	request state handler for any 5xx status
on_client_error	
	request state handler for any 4xx HTTP status that is not 404
on_not_found	request state handler for HTTP status 404
on_redirect	request state handler for any 3xx HTTP status
on_domain_change	
	request state handler for any 3xx HTTP status where domain did change as well
on_file_type_mismatch	
	request state handler for content type other than 'text/plain'
on_suspect_content	
	request state handler for content that seems to be something else than a robots.txt file (usually a JSON, XML or HTML)

---

paths_allowed_worker_spiderbar
                    paths_allowed_worker spiderbar flavor

Description

paths_allowed_worker spiderbar flavor

Usage

```
paths_allowed_worker_spiderbar(domain, bot, paths, robotstxt_list)
```

Arguments

domain	Domain for which paths should be checked. Defaults to "auto". If set to "auto" function will try to guess the domain by parsing the paths argument. Note however, that these are educated guesses which might utterly fail. To be on the safe side, provide appropriate domains manually.
bot	name of the bot, defaults to "*"
paths	paths for which to check bot's permission, defaults to "/". Please, note that path to a folder should end with a trailing slash ("/").
robotstxt_list	either NULL – the default – or a list of character vectors with one vector per path to check

---

print.robotstxt   *printing robotstxt*

Description

printing robotstxt

Usage

```
## S3 method for class 'robotstxt'
print(x, ...)
```

Arguments

x	robotstxt instance to be printed
...	goes down the sink

print.robotstxt_text	*printing robotstxt_text*

Description

printing robotstxt_text

Usage

```
## S3 method for class 'robotstxt_text'
print(x, ...)
```

Arguments

x	character vector aka robotstxt$text to be printed
...	goes down the sink

remove_domain	*function to remove domain from path*

Description

function to remove domain from path

Usage

```
remove_domain(x)
```

Arguments

x	path aka URL from which to first infer domain and then remove it

---

request_handler_handler

request_handler_handler

Description

Helper function to handle robotstxt handlers.

Usage

```
request_handler_handler(request, handler, res, info = TRUE, warn = TRUE)
```

Arguments

request	the request object returned by call to httr::GET()
handler	the handler either a character string entailing various options or a function producing a specific list, see return.
res	a list a list with elements '[handler names], ...', 'rtxt', and 'cache'
info	info to add to problems list
warn	if FALSE warnings and messages are suppressed

Value

a list with elements '[handler name]', 'rtxt', and 'cache'

---

robotstxt   *Generate a representations of a robots.txt file*

Description

The function generates a list that entails data resulting from parsing a robots.txt file as well as a function called check that enables to ask the representation if bot (or particular bots) are allowed to access a resource on the domain.

Usage

```
robotstxt(
  domain = NULL,
  text = NULL,
  user_agent = NULL,
  warn = getOption("robotstxt_warn", TRUE),
  force = FALSE,
  ssl_verifypeer = c(1, 0),
  encoding = "UTF-8",
```

```
        verbose = FALSE,
        on_server_error = on_server_error_default,
        on_client_error = on_client_error_default,
        on_not_found = on_not_found_default,
        on_redirect = on_redirect_default,
        on_domain_change = on_domain_change_default,
        on_file_type_mismatch = on_file_type_mismatch_default,
        on_suspect_content = on_suspect_content_default
)
```

Arguments

domain	Domain for which to generate a representation. If text equals to NULL, the function will download the file from server - the default.
text	If automatic download of the robots.txt is not preferred, the text can be supplied directly.
user_agent	HTTP user-agent string to be used to retrieve robots.txt file from domain
warn	warn about being unable to download domain/robots.txt because of
force	if TRUE instead of using possible cached results the function will re-download the robotstxt file HTTP response status 404. If this happens,
ssl_verifypeer	analog to CURL option https://curl.haxx.se/libcurl/c/CURLOPT_SSL_VERIFYPEER.html – and might help with robots.txt file retrieval in some cases
encoding	Encoding of the robots.txt file.
verbose	make function print out more information
on_server_error	request state handler for any 5xx status
on_client_error	request state handler for any 4xx HTTP status that is not 404
on_not_found	request state handler for HTTP status 404
on_redirect	request state handler for any 3xx HTTP status
on_domain_change	request state handler for any 3xx HTTP status where domain did change as well
on_file_type_mismatch	request state handler for content type other than 'text/plain'
on_suspect_content	request state handler for content that seems to be something else than a robots.txt file (usually a JSON, XML or HTML)

Value

Object (list) of class robotstxt with parsed data from a robots.txt (domain, text, bots, permissions, host, sitemap, other) and one function to (check()) to check resource permissions.

Fields

domain character vector holding domain name for which the robots.txt file is valid; will be set to
     NA if not supplied on initialization

text character vector of text of robots.txt file; either supplied on initialization or automatically
     downloaded from domain supplied on initialization

bots character vector of bot names mentioned in robots.txt

permissions data.frame of bot permissions found in robots.txt file

host data.frame of host fields found in robots.txt file

sitemap data.frame of sitemap fields found in robots.txt file

other data.frame of other - none of the above - fields found in robots.txt file

check() Method to check for bot permissions. Defaults to the domains root and no bot in particu-
     lar. check() has two arguments: paths and bot. The first is for supplying the paths for which
     to check permissions and the latter to put in the name of the bot. Please, note that path to a
     folder should end with a trailing slash ("/").

Examples

```
## Not run:
rt <- robotstxt(domain="google.com")
rt$bots
rt$permissions
rt$check( paths = c("/", "forbidden"), bot="*")

## End(Not run)
```

---

   rt_cache   *get_robotstxt() cache*

Description

get_robotstxt() cache

Usage

```
rt_cache
```

Format

An object of class environment of length 0.

---

rt_last_http *storage for http request response objects*

Description

storage for http request response objects

get_robotstxt() worker function to execute HTTP request

Usage

```
rt_last_http

get_robotstxt_http_get(
  domain,
  user_agent = utils::sessionInfo()$R.version$version.string,
  ssl_verifypeer = 1
)
```

Arguments

domain   the domain to get tobots.txt. file for

user_agent   the user agent to use for HTTP request header

ssl_verifypeer analog to CURL option [https://curl.haxx.se/libcurl/c/CURLOPT_SSL_](https://curl.haxx.se/libcurl/c/CURLOPT_SSL_VERIFYPEER.html) [VERIFYPEER.html](https://curl.haxx.se/libcurl/c/CURLOPT_SSL_VERIFYPEER.html) – and might help with robots.txt file retrieval in some cases

Format

An object of class environment of length 1.

---

rt_request_handler *rt_request_handler*

Description

A helper function for get_robotstxt() that will extract the robots.txt file from the HTTP request result object. furthermore it will inform get_robotstxt() if the request should be cached and which problems occured.

Usage

```
rt_request_handler(
  request,
  on_server_error = on_server_error_default,
  on_client_error = on_client_error_default,
  on_not_found = on_not_found_default,
  on_redirect = on_redirect_default,
  on_domain_change = on_domain_change_default,
  on_sub_domain_change = on_sub_domain_change_default,
  on_file_type_mismatch = on_file_type_mismatch_default,
  on_suspect_content = on_suspect_content_default,
  warn = TRUE,
  encoding = "UTF-8"
)

on_server_error_default

on_client_error_default

on_not_found_default

on_redirect_default

on_domain_change_default

on_sub_domain_change_default

on_file_type_mismatch_default

on_suspect_content_default
```

Arguments

request	result of an HTTP request (e.g. httr::GET())
on_server_error	
	request state handler for any 5xx status
on_client_error	
	request state handler for any 4xx HTTP status that is not 404
on_not_found	request state handler for HTTP status 404
on_redirect	request state handler for any 3xx HTTP status
on_domain_change	
	request state handler for any 3xx HTTP status where domain did change as well
on_sub_domain_change	
	request state handler for any 3xx HTTP status where domain did change but only to www-sub_domain
on_file_type_mismatch	
	request state handler for content type other than 'text/plain'

on_suspect_content

> request state handler for content that seems to be something else than a robots.txt file (usually a JSON, XML or HTML)

warn   suppress warnings

encoding   The text encoding to assume if no encoding is provided in the headers of the response

Format

An object of class list of length 4.

An object of class list of length 4.

An object of class list of length 4.

An object of class list of length 2.

An object of class list of length 3.

An object of class list of length 2.

An object of class list of length 4.

An object of class list of length 4.

Value

a list with three items following the following schema:
list(rtxt = "",problems = list("redirect" = list(status_code = 301),"domain" = list(from_url = "...",to_url = "...")))

%>%   *re-export magrittr pipe operator*

Description

re-export magrittr pipe operator

Index
